# Small Group Project Self-Assessment

Fill out the form below by substituting all *highlighted/italic content* by the required text.

**Team name:** Daffodil-6
**URL of the deployed application**: https://recipify.subhan.work/
**Team members**:

- *Muhammad Subhan Afzal*
- *Frederick George Brooke*
- *Mahe Chowdury*
- *Mohamed Ismail Elghuwael*
- *Minhal Valiya Peedikakkal*

**If the team agrees on an effective team size, specify it here. Otherwise, state that the team does not agree.** Effective Team size of 5

## Submission checklist

Enter a 'X' before each task that has been completed.

| Check | Task |
|---|---|
| X | The work that is submitted has been produced by members of the team only, without input from other students or third parties. All use of examples from the internet and generative AI are declared in the README.md file. |
| X | The team is familiar with the required deliverables for this project, outlined in the Module Handbook, available on KEATS. |
| X | The team's shared GitHub repository has been registered on Team Feedback. All commits are attributed to a member of the team (check this on Team Feedback!). All collaborative coding sessions have been registered by the committer on Team Feedback. The shared repository has a default branch that corresponds to the accepted version of the software. |
| X | The version of the web application that the team wishes to submit has been deployed. The URL is recorded in the README.md file. The deployed system is seeded with data that meets the requirements outlined in the specifications. The system is accessible using the required access credentials. The deployed system has been manually tested to ensure all functionality available in development works and is accessible in production. |
| X | All team members listed above agree with the claims made in this checklist. |

## Objective

Briefly outline the business objective of the system you have built. Aim to identify what the system you developed aims to achieve (do not regurgitate the overall assignment). This section should consist of a single paragraph. Aim for less than 100 words.

Recipify is a recipe sharing website that keeps things simple. Users can post their own recipes, browse what others have shared, and save the ones they like. The app includes basic social features: you can follow other cooks, like recipes, and build a personal collection of favourites. There's also a feed that shows popular recipes and chefs, plus a search function to find specific dishes or ingredients. Staff can moderate reported content to keep the platform clean. The goal is to make sharing and finding recipes easy, without overcomplicating things.

## Use cases

Use cases clarify who uses the system and how they can use it to accomplish particular tasks. Identify the **main** use cases of your team's application. For each use case, provide:

- Name: a name for the use case. If the name does not describe the task adequately by itself, add a short task description.
- Actor & trigger: Identify who and what starts the interaction with the system.
- Main success scenario & outcome: List the main steps that lead to a successful outcome.
- Alternate flows: Identify possible alternative flow conditions (e.g. what happens under anomalous conditions).

An example of a use case is as follows:

- Name: Place order
- Actor and trigger: Customer selects products and proceeds to checkout.
- Main success scenario: (1) Customer logs in, (2) adds products to cart, (3) proceeds to checkout, (4) enters shipping and payment details, (5) confirms order, (6) system processes payment and displays confirmation. Outcome: new order is placed.
- Alternate flows: Payment fails → system redirects to step (4) with error message.

| Name (& short task description) | Actor & trigger | Main success scenario & outcome | Alternative flows |
|---|---|---|---|
| *User A views notifications* | *User B likes, favourites or follows* | *(1) User B logs in*<br>*(2) User B likes, favourites a recipe, or follows User A*<br>*(3) Server creates a notification and assigns it to correct recipient (User A)*<br>*(4) User A goes to notification page*<br>*(5) User A can view the notification* | *N/A* |
| User A posts a recipe | User A fills out the recipe form and presses the post button. | (1) User A logs in<br>(2) User A goes to the post page and provides a title, description, | The user input is invalid or posting fails --> The user is redirected back to the post page. |

| | | | |
|---|---|---|---|
| | | ingredients, content, thumbnail, and tags.<br>(3) User A presses the "Post" button.<br>(4) The recipe is posted, added to the database, and can be seen by other users. | |
| User A reports a recipe | User A presses the report button, gives a reason for the report, and submits the report. | (1) User A logs in<br>(2) User A goes the post's page.<br>(3) User A presses the report button.<br>(4) User A writes a reason for the report and submits it.<br>(5) The report is submitted and added to the database and can be seen by staff. | The user has already reported the post --> The report submission is ignored, and no report is added to the database. |
| Admin or super user hides a recipe and report. | Admin or super user presses the hide button on the reports list. | (1) Admin A or Super User A logs in.<br>(2) They go to the reports page.<br>(3) They press the hide button.<br>(4) The post goes to the moderation queue and is given the "is-hidden" flag. | N/A |
| Super user deletes a recipe. | Super user presses the delete button of a report or post on either of the report or moderation queue pages. | (1) Super User A logs in.<br>(2) They go to either the reports page or the moderation queue page.<br>(3) They choose a recipe to delete or a recipe whose associated post they want to delete.<br>(4) They press the delete button.<br>(5) The post or associated post is deleted. | N/A |
| Super user releases a post. | Super user presses the release button on the moderation queue page. | (1) Super User A logs in.<br>(2) They go to the moderation queue page.<br>(3) They choose a pose to release, they press the release button, and the is-hidden flag is set to false. | N/A |

| | | | |
|---|---|---|---|
| A user registers. | A non-logged in user goes to the registration page, fills the form, and presses the sign-up button. | (1) A non-logged in user goes to the sign-up page.<br>(2) They fill the form and press sign up<br>(3) An account is made, and they can log in to it. | The user is already logged in --> The user is redirected to their dashboard when attempting step (1)<br><br>The user input invalid data in step (2) --> The user is given a pop up notifying them of the error, the following steps do not proceed until the user reattempts step (2) |
| A user logs in. | A non-logged in user goes to the log-in page, puts in their username and password, then presses the log in button. | (1) A non-logged in user goes to the log in page.<br>(2) They input their username and password.<br>(3) They press the log in button and are logged in. | The user is already logged in --> The user is redirected to their dashboard when attempting step (1)<br><br>The info input by the user is not associated to an account --> The user is told their input was valid and the following steps do not proceed until the user reattempts step 2. |
| A user searches for a recipe. | A user goes to the search page and searches for a recipe. | (1) User A logs in.<br>(2) User A goes to the search page.<br>(3) User chooses any number of keywords, tags, and ingredients and chooses a sorting option.<br>(4) Posts matching the search criteria are shown. | N/A |
| | | (5) | |
| Like recipe | A user presses the like button on a recipe. | (1) User A logs in.<br>(2) User A goes to a recipe's page.<br>(3) User A presses the like button.<br>(4) The post is given +1 like and is added to the users "My likes" page. | The user has already liked the post --> This will toggle the button, making the post unliked and removed from the user's "My likes" page. |
| Unlike recipe | A user presses the like button on a recipe on a post they liked. | (1) User A logs in.<br>(2) User A goes to a recipe's page.<br>(3) User A presses the highlighted like button.<br>(4) The post is given -1 like and is removed | N/A |

| | | | |
|---|---|---|---|
| | | from the users “My likes” page. | |
| Star recipe | A user favourites /saves a recipe. | (1) User A logs in.<br>(2) User A goes to a recipe’s page.<br>(3) User A presses the save button.<br>(4) The post is given +1 favourite and is added to the users “My favourites” page. | The user has already favourited the post --> This will toggle the button, making the post unfavourited and removed from the user’s “My favourites” page. |
| Unstar recipe | A user unfavourites / unstars a recip. | (1) User A logs in.<br>(2) User A goes to the page of a recipe they favourited.<br>(3) User A presses the highlighted star button.<br>(4) The post is given –1 favourite and is removed from the users “My favourites” page. | N/A |
| Edit profile | A user goes to the edit profile page and changes parts of their profile. | (1) User A logs in.<br>(2) User A goes to the edit profile page.<br>(3) The user changes some feature of their profile and presses the “Update” button.<br>(4) The appropriate changes are made to the user’s relation in the database. | The user input changes that are invalid --> The user is given a pop up saying they have input invalid data and steps do not proceed. |
| Change password | A user goes to the change password page and changes their password | (1) User A logs in.<br>(2) User A goes to the change password page.<br>(3) The user inputs their current password and new password.<br>(4) The user presses the “change password” button.<br>(5) The user’s password is changed. | The user inputs a password that is not valid --> No change is made to the user’s password, and the user is notified that their input is invalid.<br><br>The current password input by the user is incorrect --> No change is made to the user’s password, and they are notified that their input is invalid. |
| Log out | A user logs out of their account by pressing the log out button. | (1) User A logs in.<br>(2) User A presses the profile icon on the navigation bar.<br>(3) They press log out. | N/A |

| | | | |
|---|---|---|---|
| | | (4) The user is logged out of their account. | |
| Mark all notifications as read | A user presses mark all notifications as read on their notifications page. | (1) User A logs in.<br>(2) User A goes to their notification page.<br>(3) User A presses the "Mark all as read" button.<br>(4) All unread notifications of the user are marked as read. | N/A |
| Follow user | A user presses the follow button on another user's profile. | (1) User A logs in.<br>(2) User A goes to User B's profile page.<br>(3) User A presses the follow button.<br>(4) User A is set to follow the user; User B now has +1 follower and User A now has +1 following | User A already follows User B --> Step (3) leads to User B being unfollowed. User B has -1 follower and User A has -1 following. |
| Unfollow user | A user presses the unfollow button on another user's profile who they are following. | (1) User A logs in.<br>(2) User A goes to User B's (who they are following) profile page.<br>(3) They press the unfollow button.<br>(4) User A is set to no longer be following User B. User A has –1 following and User B has –1 follower. | N/A |
| View a notification. | A user clicks on the "view" button on one of their notifications. | (1) User A logs in.<br>(2) User A goes to their notifications page.<br>(3) If there are any notifications, User A presses on the "view" button.<br>(4) User A is redirected to the associated post of the notification.<br>(5) If the notification is marked as unread, it is marked as read. | N/A |
